

**ALERT: Election fraud is a serious risk for 2020!**

**Economic War Room releases further findings from a cyber-forensic investigation on election fraud and compromised electronic voting machines. This is an extension and important update from Episodes 20, 21, and 70.**

**Background Briefing:**

We have said it before, the likelihood of full-scale, organized election fraud is no longer just a possibility. It's a REALITY. This is not a partisan issue. It's an AMERICAN issue.

Hillary Clinton recently announced, "Joe Biden should not concede under any circumstances because I think this is going to drag out," Clinton warned. She goes on to say, "even a small margin of votes can have major consequences." <https://www.politico.com/news/2020/08/25/hillary-clinton-joe-biden-election-advice-401641>

In New Jersey, Mail in Ballots raise serious questions about election integrity with New Jersey recently rejecting 1 in 5 ballots as fraud. [https://www.realclearpolitics.com/articles/2020/06/26/1\\_in\\_5\\_ballots\\_rejected\\_as\\_fraud\\_is\\_charged\\_in\\_nj\\_mail-in\\_election\\_143551.html](https://www.realclearpolitics.com/articles/2020/06/26/1_in_5_ballots_rejected_as_fraud_is_charged_in_nj_mail-in_election_143551.html)

With the November 2020 presidential race, election fraud is a top concern. Economic War Room has been looking into this for the last two years and brings more breaking news as it relates to vulnerabilities and how your vote can easily be compromised.

Think your vote is safe if the voting machine is not connected to the internet? Think again! In this week's briefing Russ Ramsland provides more documentation on the election fraud process and how it works.

This is an updated report that highlights major security issues recently identified as we approach the 2020 presidential election.

**Given the new insights uncovered in this week's briefing, election theft concerns are valid, and action needs to be taken immediately to secure our election!**

**Your Mission:** Electoral theft is an economic weapon! Your mission is to stay alert, and educated as it relates to Election Fraud and to ensure your vote counts the best way possible.

## **Election Fraud – Forget the voting machine, all data is uploaded to the central tabulation server where election fraud is easy.**

FOR FURTHER INFORMATION BE SURE TO VIEW THESE ELECTION FRAUD EPISODES:

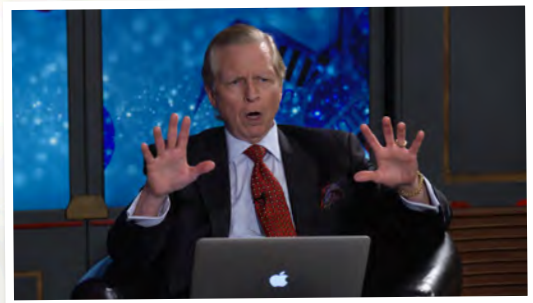

1. Due to the alarming nature of this report, we have provided the entire show of Ep 70 on voting fraud for all to see it at [XOTV.me](https://XOTV.me). View it here for free - [CLICK HERE](#).
2. Previous Short Videos by topic have also been posted to YouTube - [CLICK HERE](#).

(OSINT) –Open Sourced Intelligence Briefing- Electoral Theft Actual Case Study and Analysis: Economic War Room with Kevin Freeman. Kevin invited Russ Ramsland who has been studying this problem to update their findings as it relates the integrity of today's electronic voting machine.

### **1. Ramsland's research documents behind the scenes data related to **Election Fraud** at the tabulation server and how easily data can be altered:**

Incompetence or purposeful - The election professionals appear to have already rigged the system to make it easy to retabulate the vote counts they need.

"We're not talking about bogus voter rolls. We're not talking about bogus voters. We're not even talking about polling station equipment being hacked. That's all voter fraud. **Today we're talking about what happens once it gets to the central tabulation server. We are seeing that, depending on the system, not only is there the ability for the operator to change votes with NO ability to track the changes via an audit trail, but there is also the ability for changes to be injected into the results from outside sources with no audit trail. Some systems don't have an audit trail, such as Hart, and some systems make it easy to change or erase the trail. The vulnerabilities vary by system.**" –Russ Ramsland

Ramsland's team first observed how absentee votes were handled in a Dallas County Election:

**A. They Looked into the Logs and How Absentee Votes and Early Voting Data Was Entered:**

- They were tabulated.
- They would print a report.
- Then the votes were reset to zero and reloaded from a new place.

**WARNING: THE ONLY REASON TO DO THIS PROCESS WOULD BE TO CHANGE THE VOTES**

This was documented in the logs:

"We saw early voting, which, by the way, they played with for 4 days, early voting was over on a Friday. The election was on the following Tuesday over that entire weekend. **They were downloading, printing these results, changing them and reloading.**" –Russ Ramsland

**ALERT: Absentee and mail-in votes are easier to manipulate:**

"Then on Election Day itself, we saw a whole range of precincts actually get changed. It's a little harder on Election Day because you're having to do it in real time on Election Day because they're going to report it that night.

The next step was to have a credible cyber team map out the Dallas voting system. Remember, we are told "none of this is supposedly connected to the internet."

**B. There was No Air Gap - A Dallas County Election completely linked to the internet?**

"And what you're seeing here are all the connections for [Dallascountyvotes.org](http://Dallascountyvotes.org). And if you look at this thing, you see that this thing is connected to IP addresses all over the place and how anyone in their right mind can say that this is air gapped and not connected to the Internet is just ludicrous."

### C. A Wider Look Across the Nation and Even Globally

→ The team went on to look at other voting machine companies globally and found keys to get into the system left everywhere. [See the video here.](#)

“We found that the public facing websites were so vulnerable that we could see the admin names and the passwords for all the critical information files. And it was right there in the open.” –Russ Ramsland

→ They could see voter registration lists word wide by precinct. Twenty-seven million voter files in Florida alone could be accessed.

→ There was personal information and **voting information exposed on the internet.**

“We saw previous vote uploads. We saw all the source code. So, if we wanted to, we could have gone in and injected our source code and redirected stuff anywhere we wanted into their source code.” –Russ Ramsland

NOTE: THE CYBER TEAM DID NOT TOUCH THE INFORMATION BUT COULD HAVE GONE IN AND INJECTED THEIR OWN SOURCE CODE.

---

“In fact, they could have you in a primary election. They can have you voting in the Democrat or Republican side if they wanted it.” –Russ Ramsland

---

## Did you know?

### Private companies are running the election with no disclosure:

State, federal county elections no longer conduct their elections. They are all private companies contracted by city or federal officials.

- They sell the equipment.
- They design the software.
- They design the ballots.
- They tally all the votes.

They handle it from beginning to end their private companies with private agendas and private owners who conduct all of these elections. And that's critical to understanding part of what the problem is. This is not disclosed, but this is concerning:

**“Much of the software appears similar to that of a company called SGO Smartmatic that's actually run out of London, England by a vehement anti-Trumper and close associate of George Soros. And these software companies that are conducting our elections, for at least 28 states they upload everything via the Internet to a company called SCYTL. And SCYTL has several databases. One's called Clarity. And SCYTL is a Barcelona, Spain, multinational company. They're housing all of our votes and they're doing it in an insecure fashion.”** –Russ Ramsland

---

**George Soros Associate is Running a Private Election Company used in the US:**

According to Ramsland, The Chairman of SGO Smartmatic has numerous links to Soros:

“He started out with the U.N. and when he was at the U.N. meetings in New York, as reported by others he rented or stayed at an apartment owned by George Soros. He became the vice chairman of Soros Investment Fund. He became the vice president of Soros Quantum Fund. He's on the board of Open Society so he's pretty connected. He is currently the chairman of SGO Smartmatic. There's still Smartmatic and then there is SCYTL. SCYTL has all these databases and then there's all these private voting companies (ES&S, Hart, Dominion, etc.) and they all upload everything to SCYTL's reporting database called Clarity.

I think we've mentioned our election companies should be American owned. This is Barcelona, Spain.

Smartmatic is headquartered in London. The US State Department says they can't figure out who owns Smartmatic because the ownership is held in foundations and offshore trusts and all over the planet lacking transparency.”  
–Russ Ramsland

Where there are private companies involved in our elections, it has to be made transparent. What is happening today is not transparent.

**D. Next the Cyber team went to various companies public facing websites where they simply revealed various “hidden” files and databases.**

- There were 4 databases worldwide and they could see all the ballots.
- They observed all counting and tallying functions
- They could have gone in and seen who you voted for and since they saw the security and intruder tracking software was turned off, your vote could be changed to anybody they wanted to.
- They could have collected data on each person and who they voted for violating privacy rights

**[CLICK HERE TO WATCH VIDEO EXCERPT AND SEE DOCUMENTATION](#)**

“The bottom line is, if these “good cyber guys” could make any candidate win or lose, then so can the bad guys.” –Russ Ramsland

**2. Hacking was not needed - Intrusion Software was literally turned off.**

“The alarm system was turned off before unlocking the door, No one had to provide a password. No one had to let you in. You could coordinate with any email or report that you wanted to and manipulate the vote. There was no accounting. **So, the question we came up with was, why is this so easy?**” –Russ Ramsland

**[CLICK HERE TO WATCH VIDEO EXCERPT AND SEE DOCUMENTATION](#)**

## WHY WAS THE ELECTION SYSTEM SO EASY TO GET INTO?

### **Exhibit:** Oracle Executive Confirms “access to an entire voter data base without hacking”

“The Cyber team took and downloaded everything that was wide open in an Oracle database at a county level and on the screen you’ll see here, Oracle database shows missing security. And I’m sorry about the little yellow thing up in the top right corner that actually covers the home address of the Oracle executive we went to see in Washington, D.C. blurred out.

And he looked at it and he started to thumb through it, and he goes, ‘oh, my God, you’ve downloaded the entire database. You’ve got access to absolutely everything without hacking.’ Then he turned it over to this front page again. Now I direct you to this front page, I asked him, how do you know that the intruder tracking software is on or off?

He says, well, this is all turned off. And then he thought, ‘This is all turned off, the default position is for it to be on. I think his is something somebody did purposefully.’

I said, how did you know?

He said, ‘look at that very first paragraph on the first page, if anything have been turned on, you would have seen it listed after that. If it’s not listed, it’s not on. You should see a whole list of things right after that first paragraph. That are the security and intruder tracking pieces that are turned on.’”

---

**“What I’m telling you today and what we’re going to demonstrate is that unseen and undetected (because all the security and the intruder tracking was turned off), people can go in and intercept this.**

**They can direct the data to a remote location and change it and then reinject it back in.” –Russ Ramsland**

---

**AT ISSUE:**

- A. All votes are online, and they used the same security code to open the doors to every voter database. Default settings for the intrusion software were not even turned on and we expect this was purposeful.**

The result? It is easy to change votes and your vote is not secret. It is like having the master key and being able to open every house across the country. What could go wrong?

**[CLICK HERE TO WATCH VIDEO EXCERPT AND SEE DOCUMENTATION](#)**

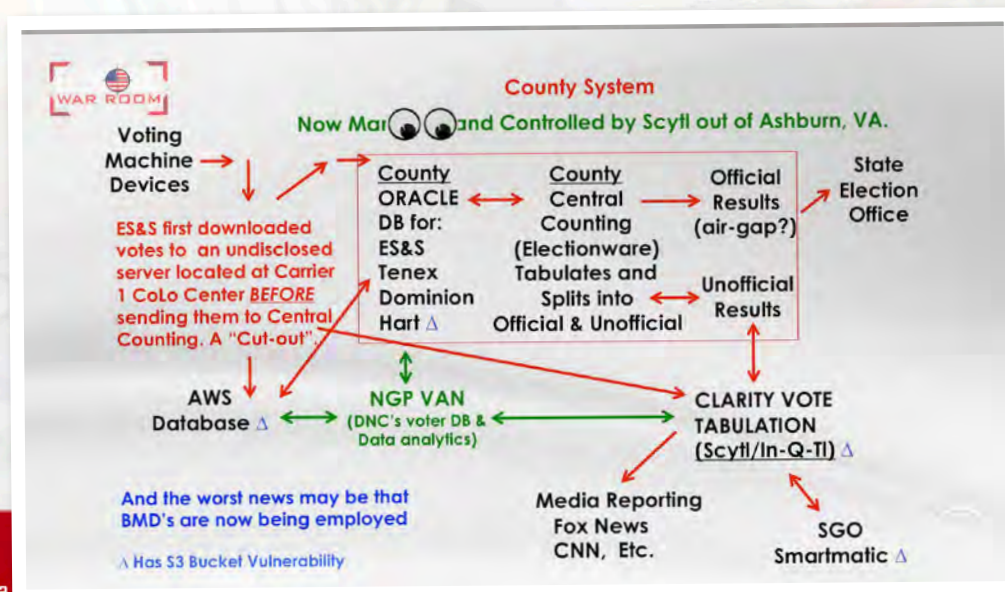

- B. A voting analytics company has a history of election fraud and does election analytics and forecasting on early voting and how many early votes they need.**

Why are they downloading and uploading data into from public databases? Evidence and timestamps suggest possible malicious activity against the integrity of our elections.

“One of the things that we realized is when we looked at all of the problems in the Dallas log, we saw literally, I think 1,800 instances where it would say there was a **time-stamp mismatch in this data and the program**. And what that means is somebody has come in with a machine that’s not supposed to be in the loop, that doesn’t sync up and has put a file in.” –Russ Ramsland

**[CLICK HERE TO WATCH VIDEO EXCERPT AND SEE DOCUMENTATION](#)**

- C. ALERT - Watch the entire [Episode 103 here](#) to see the actual examples and exhibits in full context.**

**3. Kentucky Race Results Not Adding Up - A Direct Feed from Clarity to CNN literally appears to show vote tabulations being changed in a key Kentucky Governor's race:**

That is not because CNN has some glitch on their system. They were actually getting a direct feed from Clarity probably via Associated Press, and Clarity is the vote storage and reporting company.

**No one has stepped forward with another explanation of this but you decide based on the information in this briefing.**

An Analysis of other data in this race showed inconsistencies in how the reporting software reported what was in the database:

- Looking at straight party votes and refining it by the governor's race, Russ Ramsland started seeing under votes in a straight party ticket for a lot of precincts.
- We've got their own reports that show it. And it happened in many, many precincts. But if you pull the data first by Governor's race and refine it by Straight Party Tickets, the undervotes all get awarded to the democrat. The question is, which way were they reported?
- The results came down to which way they were pulled and reported.
- **There is no transparency**

WATCH THE [VIDEO LINK HERE](#) TO SEE CNN REPORT AND VOTER LOGS:

**4. Election Fraud Exposed in Dallas County, officials ignoring it. Is This Happening in Your County and National Elections?**

Mismatched thumb drives and a private data center set up across from the election central counting office. An easy way to upload a private database and download it back into Dallas Central County database to change an election. Plus, does it really make sense for private foreign companies running US county elections.

**Observations from 2018:**

- We had people in Central Counting who were watching all of this nefarious activity going on, we got logs, we looked at it, we saw all these problems, none of which were disclosed or had ever been looked at.

### **New Election Fraud Tactics Observed for 2020:**

- The first thing they did is that instead of taking all your votes direct from the precinct to central counting, they made an unannounced stop at an undisclosed location Carrier-1 Data Center across the street from Dallas Central Counting.
- At this location they took the thumb drives out of the bags and did something with them and then re-bag them prior to sending them to central counting. The chain custody does not appear to be clearly monitored.
- They changed the process from a two-step process to a three-step process.
  - Now, **what happens is that they see a database that they create before the counters at Central Counting see the data.**
  - The advantage to that is you can either go ahead and change what's on the thumb drives themselves, **(If you've got a good algorithm) or you can take the database you have created, change it in a variety of places by a variety of methods and eventually download it back into the Dallas Central County database for unofficial votes and transfer it to the database for official results.**
- All the audits and watcher are at Central Counting, but the games appear to be happening before the votes even make it to central counting.

"There was there were some observers at Dallas Central County and they reported they noticed when they were getting these bags in with the thumb drives, the bag is labeled where it came from and the thumb drive is labeled.

And they suddenly realized they were seeing things like a thumb drive from UP Methodist arrive in a bag from El Centro College West. How sloppy is that?

They just were in a hurry at the undisclosed location and got the wrong thumb drives in the wrong bags. So, they said, well, where are these? How did this happen? Where these come from? Oh, well. And then somebody said they're coming from Carrier-1 Data Center and they could literally go and see people come in across the street bringing these bags from Carrier-1 Data Center." –Russ Ramsland

## 5. Election Fraud - New Barcode technology provides 10 untraceable ways to cheat

While this appears to be a shift back toward paper ballots, there is no way to really audit actual votes.

- Ballot Marking Devices Masquerading as a Paper Ballots. It looks and feels like a paper ballot, but we learn how votes can easily be changed.

**Alert: The reading device also houses a printer and can change votes with no one knowing. With barcodes it is election fraud made easy.**

- It is so subtle because it's in a barcode. You see all these lines. Just the thickness of the line can change the difference between being a four and a seven, and that puts you at a different place in the ballot.

Example: You go to vote for your candidates, you put the ballot in the scanner/ printer. The bar code can be changed.

When you rerun that as an audit, it reads the revised bar code and potentially a different outcome than the actual vote. There is nothing you can audit.

## BMD'S - HOW THEY CAN CHANGE YOUR BALLOT

1. **Dominion Image Cast Evolution ("ICE") BMD allows the printer to change your ballot**
2. **ES&S XL & ExpressVote XL BMD's (even worse than ICE BMD's)**
  1. **Undervote Thief** - Leaves undervote candidate blank for voter's review, then adds name and barcode in reader
  2. **Opportunity Maker** - Leaves down ballot actual vote blank for review, then adds name and barcode in reader
  3. **The Stowaway** - Barcodes print in Rows of 3. If 3 aren't required, a white space is created that a barcode can be inserted into.
  4. **The Invalidator** -Barcode Start or Stop line is defaced so vote isn't counted.
  5. **The Fixer** - This simply changes the Barcode line thickness to indicate another candidate
  6. **The Substitute** - This simply substitutes one Barcode for another
  7. **The Bottom Feeder** - Extra barcodes are added at the end, meaning extra votes
  8. **The Unauditable Record** - Black is printed over the human readable portion by the printer in the reader, making it unauditable
  9. **The Blackout** - Black is printed over both the human readable portion and the barcode by the printer in the reader, making it unauditable
  10. **The Code Injection** - Special Barcode characters can be injected to cause other Barcodes to be skipped, etc.

## Why You Should Care?

- [Economic Battle Plan™ 70](#) provided extensive documentation of the potential for election fraud and we suggested paper ballots. Paper ballots are no longer a possible solution; therefore, action needs to be taken now to ensure a fair 2020 election.
- This battle plan provides more documentation of election fraud risk (with evidence that it has actually been executed) related to inconsistent time stamps and voter log data manipulation.
- Look at the reporting, the political statements and the push for mail-in voting. The documentation above shows mail-in ballots are more easily manipulated.
- We are already being set up for a contested election in the 2020 election race and the process has begun to destroy trust in our elections.
- Our sources indicate the Democrat party already has lawyers ready in key battleground states to contest the results and try to ensure wins for their candidates.
- We were not able to achieve enough momentum from [EBP 70](#) to get a technical fix to the electronic voting system, and this is a critical election. Be Alert.
- We are in the ultimate economic war as 2020 will have dramatic impact on pocketbook issues and economic liberties.

---

In the Economic War Room, we encourage Americans to be the “small ships that make the difference.” You cannot solely rely on the government or the president to solve your problems. You have to make a difference. It is up to you to help take our country back and create a voice for economic liberty.

---

“One of the items it shows... (are) the emails for the poll workers. That means 7,000 poll workers in different areas of Florida have all of their information compromised. So, if we have poll-worker databases, we know who’s going to work the polls. What do you think would happen if a foreign intel service then decides to go to those poll workers and compromise them to control them?” –Jekyll, “White-Hat” Hacker

## Action Steps:

Share this battle plan with your friends.

1. The potential for election fraud on a national scale is real. We encourage you to read this and our other election and voter fraud battleplans. Watch the entire episode of [EP 70](#) as it includes actual video footage of a “white-hat” hacker explaining the ability to access our supposedly secure US voting system. This was done without a hack, in open source, through public access software.
2. **If it is possible, vote in person instead of mail in and absentee ballots. If you cannot get to the polls, ensure you can vote through absentee voting.**
3. Contact your representatives and send this battle plan, plus EBP [70](#), [20](#), and [21](#) to them. Ask them to ensure there is true integrity in our election system.
4. Go to [www.economicwarroom.com/myvote](http://www.economicwarroom.com/myvote) for other critical information.
5. We called for this before, but a vigorous investigation, exposure and correction would be a monumental republic-restoring process. AG William Barr needs to get on this!
6. At this point in the election, it appears our only alternative for 2020 is to have constitutional lawyers in the key polling centers who understand the weakness in our current election system and who can watch and stop the fraud and illegal voting tabulations.
7. Be educated and understand the real risks of election fraud and election integrity. THIS IS LIKELY TO BE AN ONGOING TOPIC ACROSS AMERICA. WE WANT YOU TO HAVE THE FACTS. Go to [Economicwarroom.com](http://Economicwarroom.com) and sign up for our [Economic Battle Plans™](#). Get up to speed with our previous episodes and battle plans on this topic. Review Economic War Room’s Episode 20 ([Battle Plan 20](#)) on “Election Integrity”, and Episode 21 on “Election Fraud” ([Battle Plan 21](#)).
8. **Send this battle plan to friends and ask them to sign up for our weekly updates ([www.economicwarroom.com](http://www.economicwarroom.com)). Be sure to catch the data and links below for more documentation. We want you to have access to key information to make your own intelligent decisions.**
9. Weaponize your money toward impact investing that strengthens America.

# ECONOMIC BATTLE PLAN™

ELECTION FRAUD IS A SERIOUS RISK **3.104**

CLEARED FOR RELEASE 09/10/2020 (ECONOMIC BATTLE PLAN™ POINTS: 100)

**We need more Economic Patriots on the team!** Consider what you can do now to help strengthen America or even help someone in need. Keep in touch with your congressional representatives. Choose from the list or set your own goals:

- ✓ Get others to sign up on our website (<https://www.economicwarroom.com>) and review our free weekly Economic Battle Plans™. Each of these will address critical solutions to the threats highlighted in this briefing.
- ✓ At our [Economic War Room®](#) website, sign up to TheBlaze for our complete weekly shows. Please use our code (**ECON**) from that link for a discount and FREE trial.
- ✓ Follow, like, comment, and share on [FB](#) and [Twitter](#). Look for short video segments on [FB](#) and make sure those are shared. We recognize these tools may be compromised at times, but if they are not filtered, they are the major platforms available to reach out to the public. [Know that alternatives to the social platforms listed above are under EWR consideration.]
- ✓ Check out XOTV (<https://xotv.me/channels/233-economic-war-room>), a new free speech video platform that Economic War Room is proud to partner with. Access is FREE but consider making a donation to EWR on that website to help with Economic War Room's research and production costs.
- ✓ You are welcome to share this battle plan and our short video segments with friends on [FB](#) or [YouTube](#). We set up the Economic War Room® to be your resource for information, preparation, and mobilization.
- ✓ Do this now! Have a financial action plan based on multiple geopolitical scenarios developed now. Advanced preparation is key. Trying to figure what to do when an economic event happens is usually too late.
- ✓ Talk with your financial advisor as it relates to your savings/investments. Ensure your advisor understand the potential impact economic/geo-political scenarios could have on your portfolio. LOOK FOR ECONOMIC WAR ROOM'S ADVISOR AND INVESTOR ONLINE TRAINING COURSES COMING SOON.
