

Biden Energy Policy Will Destroy Domestic Energy

Within the first 30 days of his Presidency, Biden promises to ban fracking and pipelines are immediately being shut down. Energy Independence is a national security threat but Biden appears more aligned with Putin and Xi's needs than Americas.

These policies will cost American consumers and our energy markets. It could even contribute to rising food prices as transportation costs increase. Even Tribal Lands that previously benefited from energy are concerned about revenue loss impacting their communities.

Sadly, the elites think it is acceptable to eliminate US jobs on the Keystone Pipeline with wild promises of jobs in new industries someday. At the same time no thought was given to supporting jobs or providing for workers in the short term.

At the same time, it seems like nobody wants to own energy stocks as Wall Street investment funds divest trillions of dollars in fossil fuels. Without the needed investment, America will be completely energy dependent on our adversaries.

Despite the above negative ESG perceptions from Wall Street, a strong US Energy production is critical to our national security. Your briefing this week includes energy expert Troy Andrews as he discusses energy investment opportunities ahead and why you might consider Energy stocks when others are looking the other way.

Your Mission: To better understand the importance of Energy Independence and where fossil fuels may still fit within your investment portfolio to keep America strong.

“Joe Biden is now President and began to implement his energy policies almost immediately. He had a decision to make, choose American consumers and energy producers or Vladimir Putin and Xi Jinping?” –Kevin Freeman

Your briefing this week will look at the Biden energy policy, see who it benefits and what we can and should do about it. This will impact your life and your finances, and you need to get prepared.

Ep. 4-126 (OSINT) Open-Sourced Intelligence Special Report. This highlights conversations in the Economic War Room with Kevin Freeman and energy expert Troy Andrews. Mr. Andrews, is one of the founders of Paradigm Midstream, he leads the business development team and also serves on the board of the Joint Ventures. He has more than 28 years of experience in the oil and gas industry with a focus on project development, team building, wellhead gathering, gas processing, NGL supply/logistics and finished fuels marketing. Previously, he led the Bakken Development Team at Aux Sable and the NGL Business Unit at Lansing Trade Group. Prior to Lansing, Mr. Andrews was at SemStream, where he led the propane supply and logistics teams across North America. He began his career at The Williams Companies where he spent 17 years in terminal operations, pipelines, business development, retail and wholesale supply/logistics and energy trading.

Case Study – Russia and others have been pushing for America to ban Fracking?

For over a dozen years, Vladimir Putin has tried to get fracking banned. He hates the idea that the American shale industry made America energy independent. He spent billions lobbying to end fracking and also promoting fringe environmental groups who opposed fracking. These are well documented facts.

At the same time, the Chinese government has been desperate for oil and livid when America took the energy output from the Keystone pipeline. They knew that would allow Americans to benefit from North American energy production rather than making it available to the Chinese market.

Both Putin's Russia and China had specific objectives regarding American energy policy. They needed a certain outcome that would benefit their nations, even at the expense of American consumers, and American energy producing states like Oklahoma and Texas. They needed a different outcome. Even the states that supposedly voted for Biden, such as New Mexico and Pennsylvania are going to feel the pain of our adversaries' preferred policy.

If you were President of the United States, with a choice between supporting America's national security or teaming with Biden and Xi, which would you choose?

1. A review of American Energy Policy under the Trump Administration.

- President Trump tried to smooth things out and reduce regulations so we could produce more energy.
- These are the facts. If we are not producing energy, it gets produced overseas and then we're beholden to whatever other country we can purchase energy from.
- Iran, the Middle East, and Russia benefit from Americas shut down of the pipeline and fracking ban discussions.
- **At the same time**, The Middle East and Russia do not have the cleanest energy policies or policies for producing oil and gas? **They do not conform to the same strict environmental standards that we do here so by default we are causing a bigger environmental challenge by not producing fossil fuel energy ourselves.**

"The carbon footprint will just spread over there and the carbons will be released into the atmosphere in those countries. And it'll be worse. It'll be much worse." –Troy Andrews

2. Biden Promised to Not Ban Fracking – But already he is moving that direction.

"I do rule out banning fracking because the answer is, we need other industries to transition to, to ultimately get to complete zero emissions by 2025. What I will do with fracking over time is make sure that we can capture the emissions from the fracking, capture the emissions from gas. We can do that by investing money in a transition to that." –Joe Biden

Yet in the first days of Biden's administration, the first thing he did was put a pause on fracking on federal lands.

PAGE 3

The Results - Even the Native American Tribes are concerned on how it will impact them.

- The unfortunate thing for that is a lot of the Native American tribes that supported the policies of the current administration are now being hurt because they get a lot of the revenue from their oil industry that's on the reservation.
- We've even seen them reach out to the Department of Interior with letters saying "you can't do that on our sovereign lands," and "this is unconstitutional."

"They use their energy production to help pay for their health care, to provide for education, to provide for people that need food and assistance. Public services. And so banning fracking on federal lands would just crush them." -Troy Andrews

Remember the true cost of higher energy as we identified on Economic War Room's inflation briefing.

- **Inflation and Higher Energy Costs**

- Energy is essential to your well-being. If gas prices rise, your wallet is impacted and you pay.

- You use energy to heat and cool your home, run appliances and fuel your transportation.
- **The Biden Administration wants higher energy prices to reduce consumption and make alternatives more competitive.**
- **The Biden Administration wants to end the use of fossil fuels, even though they are by far the most economical choice at present.**
- Even though Biden denied that he wanted to ban fracking in the debates, there are dozens of times he said as much. This would end the "shale revolution" and result in higher prices.
- This is all being done as it helps the Russian and Middle East producers.
- When you realize that the cost of almost everything has an energy component, you can see **that higher energy prices will impact everything else.**

"Who really benefits from this policy? The benefit would be other countries, you know, the administrations of Russia, China, Saudi Arabia, Iran and Iraq and those sorts of places. Also, Venezuela, places where the oil and gas industry can flourish and bring products into the US.

The energy business in the US is a national security issue. And it was deemed so by many administrations. So if it's a national security issue, that's all you need to know."

–Troy Andrews

3. Canceling the Keystone Pipeline – Another Great Benefit for China?

- Pipelines continue to be the safest way to move a molecule of oil and gas.
- If the average person in America understood how safe a pipeline really is and the kind of technology involved, almost all would support it over rail or trucking.

The pipeline technology over the last 10 years has been significant. They now take electricity put it through the pipeline so the coating will not rust and the thickness of the pipe does not change over time. It's amazing the technology that they have.

There is disinformation being fed to people about how dangerous pipelines are. They really are safest alternative we have today for moving energy .

ALERT: Now with the Keystone Pipeline being shut down, that energy will be shipped from Canada via tankers to China. Not only have we lost jobs, more emissions will be created and America loses its lower cost energy alternatives.

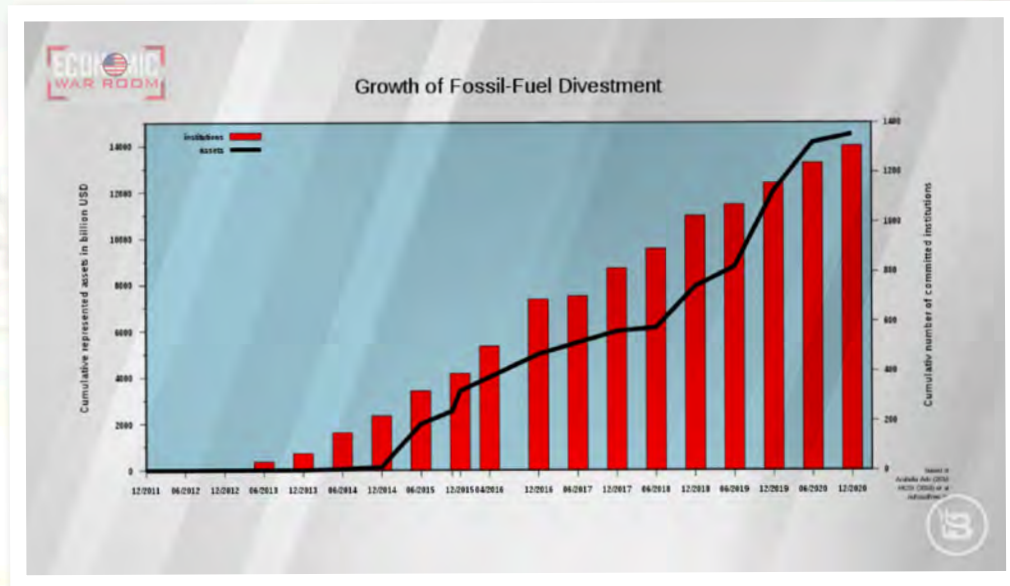

4. A Look at Energy Investment Today - Midstream, Downstream, and Upstream

There is this enormous push from environmentalists and from the leftist in the ESG movement to divest anything that has to do with American energy. Wall Street has been moving against fossil fuels. **There's been over \$14 trillion dollars pulled out of investment in in fossil fuels, but these will not go away overnight and that could create investment opportunities.**

PAGE 5

Ask yourself, why is it when we set up accords with other countries, America holds our end of the commitment and others do not hold up theirs? We spend billions of taxpayer dollars and get nothing in return. In the meantime, we invest in ESG initiatives, but do not hold other large countries accountable to the same standards.

“It’s seemingly a political movement more than it is a reasonable movement or reason- based movement, because it’s really not improving the environment. It may be worsening the environment because that same energy is being produced in Middle East, in Russia and other places that don’t have our standards. It’s also worsening the environment, potentially, if we’re pushing to China and we’re going to the green new ideas, which are wind turbines and electric cars and all of that. They are beneficial in some areas, but in other ways they’re forcing rare earth minerals and other problems. **China, of course, loves the idea that we ban fossil fuels.**” –Troy Andrews

- The average person in America doesn't understand the rare earth minerals issue.
 - We actually have our own rare earth minerals but are not allowed to get them due to environmentalist rules.
 - Instead, we buy rare earth mineral from China and support their economy and national security interests. China has to be loving the way America defeats its own economic interest and national security.
- From an investment standpoint, energy stocks, oil and gas stocks, have become the new tobacco stocks. Nobody wants to own them, which is a is a is a dangerous thing, because if we don't have investment in our energy industry, we will be completely energy dependent.
- This is bad for our economy, bad for consumers, bad for the environment, bad for people in general, bad for the world.

5. As Wall Street seeks to move away from fossil fuels, You can invest in energy infrastructure that helps strengthen America. There are three key sectors related to energy:

- 1. Upstream** (exploration and production, aka E&P, companies and those that serve them)
- 2. Midstream** (tollbooth of the energy superhighway where energy is transported)
- 3. Downstream** (companies that convert crude oil and natural gas to products for sale)

"Midstream is the space that I'm in with pipelines. Upstream is the drilling wells. The actual fracking, they bring the oil out of the ground, the natural gas, and some water elements come with it. That's taking products from the wellhead, delivering it to delivery hubs by pipeline storage tanks, those sorts of things.

Downstream is refining fuels, natural gas infrastructure. Downstream is delivering it to your homes, those sorts of things, refining and marketing. So when you go to the gas station, that's the downstream that's buying it. And they all have different investment aspects to them.

As long as you're using energy and the oil and gas is flowing through the pipelines, midstream gets paid regardless of what the price is upstream. You want to get the

best price. If oil prices are high, that becomes more profitable. Downstream, has advantages as well, sometimes with lower energy prices, you sell more gasoline, you get more people to your store. So, they all have their unique dynamics."

–Troy Andrews

6. Thanks to Biden's policies we are quickly losing our energy independence. This will come at a cost to our national security and our economy.

"The markets always overreact to things. And so, there's been a massive pullback. And to be honest with you, a lot of private equity groups are backed by pension funds and teacher's union pension funds where the politics of what's being invested in creates the weaponization of that money." –Kevin Freeman

- If we import all of our oil at the same time that our dollar is weakening, our economy is going to be in big trouble!
- Globally, the world is dependent on a petro-dollar that means all oil traded globally was priced in dollars, and that gave us a huge advantage, and it was important. But Russia and China have been fighting to stop that.
- In fact, the Chinese have begun trading oil and oil futures in renminbi (or the Chinese Yuan). That creates a potential problem for our economy.

7. Investment in our energy independence is critical, but with changing regulations it is important to have an advisor. The strategy is going to be ever changing and the opportunities are going to be adaptive.

As far as making energy investments in midstream, downstream, or upstream, all those things are going to be changing as regulations are put in place.

Troy Andrews shares some topline insights:

- American Energy has debt, the producers will not default and it is selling at a massive discount because people are uncertain. Identifying the right debt opportunities could be profitable.
- With the debt, a lot of these companies that have taken on debt over the last five or six years and are trading at a discount. And it's pretty illiquid. But there's opportunities out there for that.

“If you’re in the energy business, you are producing cash. This is not like the Internet business 20 years ago where you’d hope that someday you may get a return on it. You get real returns. It’s a real commodity. People are using it on a daily basis. They depend on it. Unlike tobacco stocks where we saw the demand for tobacco use went sharply lower. We’re not getting off oil and gas any time soon.” –Troy Andrews

- Energy should not be a political issue. Both sides of the aisle have to use energy. So keeping energy costs affordable and secure for Americans should be of utmost importance to any administration.
- If you ban fracking and if you eliminate the American shale industry, prices will go up. And we will ultimately be forced to get our products from another country.
- For those who stay in business, if you have energy available to sell, the price will be higher. You’ll actually have the potential to make more money off of the higher pricing.
- Expect energy companies to invest in other countries. There will be plays in Mexico and other places as you’re going to see nontraditional areas become a little more important, and where it’s a little more expensive to drill.

“The higher the price, to be honest with you in my business, the better, because producers are making tons of money when they extract it out of the ground. They’re going to keep extracting it because they’re making so much money to the extent that they can and they’re not banned from doing it. They’re going to go to areas that are outside the federal jurisdiction and they’re going to they’re going to drill in those areas and make more money. The consumers will end up paying for it.” –Troy Andrews

8. Economic War Room Training and the NSIC will be equipping advisors in the area of energy investments with thought leadership from team members and associates like Troy Andrews.

- With energy investments, you need to know what you’re doing and you need to know the companies.
- Every company is managed and operated a little bit differently. Every company has a certain amount of risk profile. And some companies, it’s just good to have an advisor who can help you.

“The progressive agenda is frightening and they’re fighting with great intensity. Their plans are, in many cases, despicable. They’re talking about creating economic dependence, not independence.”

–Kevin Freeman

- This is our time to stand up for America. The pressure is enormous on all of us to give up. Now, it won't be so bad. Get in the car, get on the train. But we need to stand up and fight for our lives and fight for the future of our children and our grandchildren.
- Troy Andrews has shared some highlights on the energy industry and how it is under attack, but Americans can help and find ways to invest in the opportunities ahead.
- We need more financial advisors to participate in the Economic War Room® classes.

9. Having a Financial Advisor that understands the geopolitical dynamics and energy threats will be more important than ever before.

- You may be wondering how you can keep up with all of this?
 - You want to do the right thing but don't know what to do or how to do it.
 - Fortunately, there are some very good financial advisors who should be willing to help you weaponize your money to protect your values.
- The far left is promoting ESG (environmental, social justice, and governance). These are code words for their radical agenda.
- Our polling indicates that most Americans would prefer LSV (Liberty, Security, and Values).
- The bad news is that too few financial advisors know how to make the switch and help their clients. The good news is that the Economic War Room has partnered with Liberty University to train interested advisors.

10. We need more financial advisors on the NSIC team that can help America win the ECONOMIC WAR.

- You can help is by nominating your financial advisors to our program. Whether you work with a stockbroker, financial planner, insurance agent, or CPA, we want to help them help you.
 - What we are asking is that you provide us the name and contact information of anyone who helps you invest. And then tell them about our training. That's it. To do that simply go to EconomicWarRoom.com/advisor. This will take you less than a minute. But it could be the most important thing you do today.
 - After you've have nominated your advisor, please consider calling your advisor and encourage her or him to take our upcoming training class.
 - We've been in this fight a long time and now our training has become critical.
 - Advisors will be invited to join the National Security Investment Consultant Institute, or NSIC Institute for short. They will learn how to help you protect your investments.
 - More importantly, they will learn how to help you weaponize your money to defend your values and our collective liberty.
 - We are also developing a client track for those who manage their own money.

Why You Should Care:

- ⇒ We are in an economic war and new energy policies may change the way you want to invest and spend.
- ⇒ ENERGY INDEPENDENCE IS CRITICAL TO AMERICA'S NATIONAL SECURITY.
- ⇒ Wall Street may be leaving investment opportunities on the table as it relates to fossil fuels.
- ⇒ Globalists on the left have been leveraging your money against America and in some cases against you.
- ⇒ The far left is promoting ESG (environmental, social justice, and governance). These are code words for their radical agenda and they are working against all fossil fuels to Russian and China's delight. We all want a clean air and water, how we effectively achieve that is up for debate.
- ⇒ Polling indicates that most Americans would prefer investing in LSV (Liberty, Security, and Values).
- ⇒ With the changing political landscape, too few financial advisors know how to make the switch and help their clients in this area. Economic War Room has partnered with Liberty University to equip interested advisors to help you protect your investments and strengthen America.
- ⇒ NSIC advisors can also help weaponize your money to defend your values and our collective liberty.

Next Steps:

1. [CLICK HERE](#) to learn more about Economic War Room's financial advisor [training](#). [We](#) will be announcing the next round of classes soon.
2. Be sure to sign up for our free Economic Battle Plans™ - [CLICK HERE](#)
 - If you are following Economic War Room you will be on the leading edge as it relates to global threats, geopolitical analysis, and how you can weaponize your money to strengthen America. Your money, livelihood and way of life are at risk and these tools are designed to mobilize America to protect their economic liberty.

ECONOMIC BATTLE PLAN™

BIDEN ENERGY POLICY WILL KILL DOMESTIC ENERGY

4.126

CLEARED FOR RELEASE 02/18/2021 (ECONOMIC BATTLE PLAN™ POINTS:93)

In the **Economic War Room®**, we encourage Americans to be the “small ships that make the difference.” You cannot solely rely on the government or the president to solve America’s problems. You have to make a difference. It is up to you to help take our country back and create a voice for economic liberty. [The small ships are based on Churchill’s Operation Dynamo that rescued the British Expeditionary Forces in the Miracle of Dunkirk.]

We need more Economic Patriots on the team! Consider what you can do now to help strengthen America or even help someone in need. Keep in touch with your congressional representatives. Choose from the list or set your own goals:

- ✓ Get others to sign up on our website (<https://www.economicwarroom.com>) and review our free weekly **Economic Battle Plans™**. Each of these will address critical solutions to the threats highlighted in this briefing.
- ✓ At our **Economic War Room®** website, sign up to TheBlaze for our complete weekly shows. Please use our code (**ECON**) from that link for a discount and FREE trial.
- ✓ Follow, like, comment, and share on **FB** and **Twitter**. Look for short video segments on **FB** and **Rumble**. and make sure. We recognize these tools may be compromised at times, but if they are not filtered, they are the major platforms available to reach out to the public. [Know that alternatives to the social platforms listed above are under EWR consideration.]
- ✓ Check out XOTV (<https://xotv.me/channels/233-economic-war-room>), a new free speech video platform that Economic War Room is proud to partner with. Access is FREE but consider making a donation to EWR on that website to help with Economic War Room’s research and production costs.
- ✓ You are welcome to share this battle plan and our short video segments with friends on **FB** or **YouTube**. We set up the Economic War Room® to be your resource for information, preparation, and mobilization.
- ✓ Do this now! Have a financial action plan based on multiple geopolitical scenarios developed now. Advanced preparation is key. Trying to figure what to do when an economic event happens is usually too late.

Shareable Quote:

**“America’s future depends on this.
Remember, what we see is a **marketplace** our
enemies view as a **battlespace**. That is very true
in regard to energy.”**
